COMPANY

About PC PROJECT

PC PROJECT is a Greek business technology company, founded in Corfu in 2011. What began as a computer service workshop has grown into a provider that covers the full spectrum of business IT: infrastructure and networks, business software, security systems, custom software and ongoing technical support.

The company takes responsibility for a project end to end — from the initial assessment and design to installation, system integration and long-term support. Its approach is simple: understand how a business works, then improve its operations without disrupting them.

> **Independent Technology Partner.** PC PROJECT is an independent company. It is presented on this platform as a technology solutions partner and is solely responsible for its proposals, implementation and technical support.

Network and server rack after reorganisation and upgrade by PC PROJECT.

WHAT PC PROJECT DELIVERS

Technology Solutions

Eight solution areas, designed, delivered and supported by one team — so that infrastructure, software and security work together from day one.

IT Infrastructure & Enterprise Networks

Servers, enterprise networking and Wi-Fi, cloud and storage, backup and disaster recovery.

Stable, secure infrastructure that keeps operations running.

Business Software & Digital Transformation

ERP and POS systems, business computerization, commercial applications and digitised workflows.

Connected processes, from point of sale to accounting.

Custom Software Development

Bespoke business applications, web platforms, system integrations, APIs and process automation.

Software that fits the way your business works.

Security Systems & AI Video Analytics

CCTV, thermal cameras, alarm systems, access control and intelligent video analytics.

Protection of people, premises and assets, with remote visibility.

Fleet Management & IoT

GPS tracking for vehicles and vessels, telematics, real-time monitoring and IoT device integration.

Lower operating costs and full visibility of your fleet.

Hospitality Technology

Complete technology infrastructure for hotels, resorts, tourism facilities and commercial properties.

Guest-facing and back-office systems from a single partner.

Managed IT Services & Technical Support

Support contracts, preventive maintenance, infrastructure management and agreed service levels (SLAs).

Predictable support and fewer disruptions.

Technology Leasing & Managed Printing

Leasing of IT and printing equipment, with service, consumables and technical support.

A predictable monthly cost instead of an upfront investment.

INVESTING IN GREECE

Technology for International Investors

An investment in Greece usually means working with many suppliers at once. For the technology layer, PC PROJECT offers a single point of responsibility — from the assessment of a site to a fully operational, supported business.

Hotels & resorts
New developments, acquisitions and renovations: networks, guest Wi-Fi, business systems, security and support.

Offices, retail & showrooms
Workplace IT, networks, POS and printing — ready for opening day.

Production, logistics & fleets
Industrial-grade networks, security systems and vehicle fleet tracking.

Existing businesses
Assessment and upgrade of the IT you take over when acquiring or expanding a business.

What to expect

- ✓ One accountable partner for design, implementation and support
- ✓ A clear scope, technical proposal and timeline before work begins
- ✓ Communication in English and Greek
- ✓ Ongoing support after go-live, under an agreed support contract

PC PROJECT provides technology services only. Investment, residency and legal matters are outside its scope.

WHY CHOOSE PC PROJECT

Why PC PROJECT

01
One partner, end to end
Assessment, design, implementation and support under a single responsibility.

02
Established in 2011
More than a decade serving businesses, hotels and public organisations.

03
Certified management systems
ISO 9001 for quality management and ISO 27001 for information security.

04
In-house software team
Custom applications and system integrations developed by the company's own team.

05
Long-term support model
Support contracts with preventive maintenance and priority service.

06
Business continuity focus
Backup, systems monitoring and resilient infrastructure designed to minimise downtime.

HOW PROJECTS RUN

Project Lifecycle

01 — Assessment
Site visit, review of existing systems and definition of business requirements.

02 — Design
Technical architecture, technology selection and a clear proposal with scope and timeline.

03 — Implementation
Installation, configuration, integration and testing, with minimal disruption to operations.

04 — Support
Ongoing support, preventive maintenance and monitoring under an agreed contract.
